# SA6400

**Brand:** Synology

**Product Code:** SA6400

**Availability:** 10 **Weight:** 16.50kg

**Dimensions:** 88.00mm x 482.00mm x

724.00mm

**Call for Price**:

### **Short Description**

Synology SA6400 12-Bay Rackmount NAS with Redundant Power (Diskless)

### **Description**

## Highly scalable storage for enterprise and studios

The 12-bay Synology SA6400 is designed for rapid data scaling. With support for up to 108 drives after expansion, this unit is ideal for enterprise data centers, large production studios, and growing businesses in the retail and hospitality sectors looking to tackle data-intensive projects while leaving room for future expansion.

# **Scalability**

Up to 2.1 PB with 8 x RX1223RP expansion units

## **CPU**

Over 6,500/4,000 MB/s sequential read/write

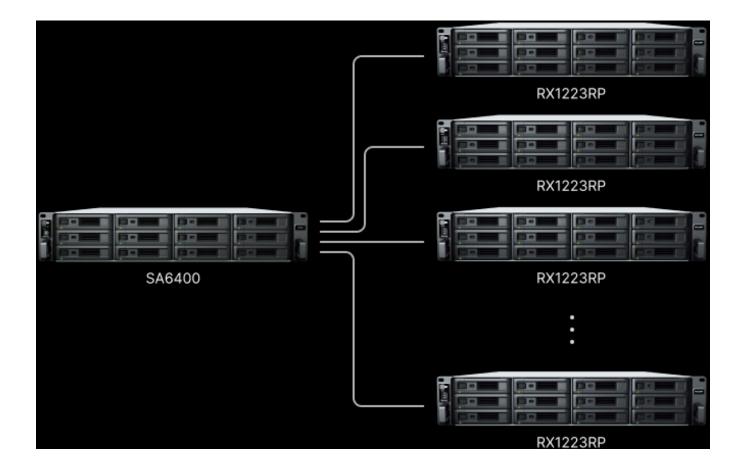

# Networking

Optional 25/40GbE or Fibre Channel connectivity

# **On-demand storage expansion**

The SA6400 scales up flexibly whenever your data demands do. Accommodate up to 9 times the original capacity by adding 12-bay RX1223RP expansion units as your deployment grows.

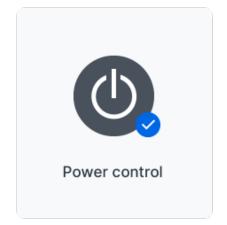

| Built for high reliability   |
|--|
| The SA6400 is designed with built-in redundancies to keep mission-critical services running, even when disaster strikes. |
|  |
|  |

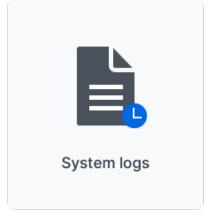

## Out-of-band (OOB) management

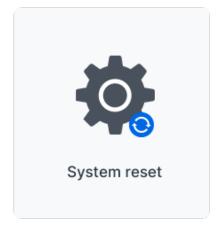

Remotely power on/off, force restart, and reset your server, or view real-time and historical DSM system logs, even while the device is powered off or the primary network is down, using the dedicated out-of-band management console.

# **Redundant power supply**

## Failover cluster

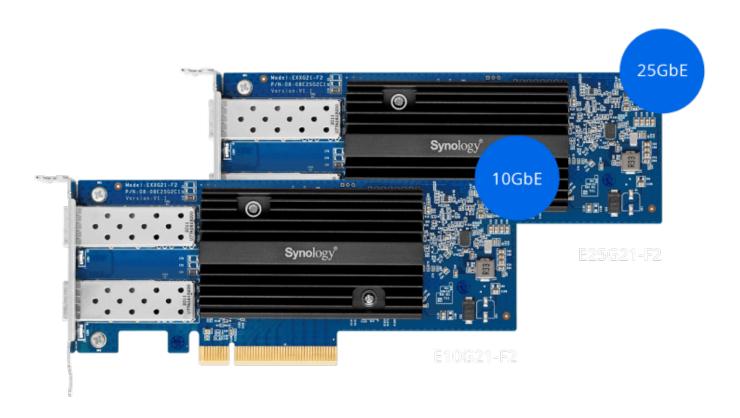

| Advanced networking entions  |
|--|
| Advanced networking options  |
| The SA6400 has the flexibility to accommodate different operating environments.                    |
| Built-in fast connectivity   |
| Two 10GbE RJ-45 ports provide rapid transfer speeds right out of the box.                          |
|  |
| Configurable networking options  |
| Add up to 2 extra 10GbE SFP+/RJ-45, 25GbE SFP28, or Fibre Channel ports in varying configurations. |

## Failover and network balancing

Bond multiple network interfaces with Link Aggregation to enable automatic network failover and load balancing.

Versatile data storage and business application platform

Provide easy access to business data, consolidate digital assets, or host cost-efficient business solutions.

Flexible file server

# Central backup server

Business application platform

## Flexible file server

Take advantage of the SA6400's high storage capacity and expansion capability to host large amounts of data on a central repository. Provide user-friendly access to business data and set up powerful cross-site syncing to empower remote and multi-site collaboration.

### **Private cloud**

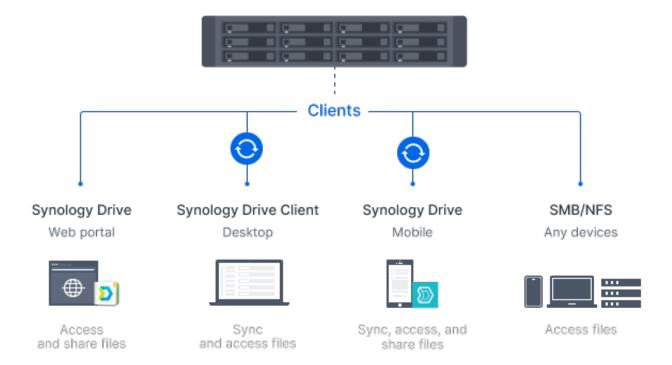

### A private cloud suite for file sharing

Empower your entire organization with a streamlined ability to access, share, and sync data from anywhere. Provide employees with access to corporate files through mobile

apps, desktop clients, and a browser-based interface. Set granular file and folder access and sharing permissions. Maintain a full overview of file activities and track file share settings changes with detailed records in the Synology Drive Admin Console.

### SMB/NFS implementation at scale

Leverage SMB or NFS protocols to provide efficient access to company files over the local network or VPN. Manage data access privileges with access control lists (ACL) through Active Directory/LDAP integration and protect files against tampering, loss, or removal with built-in snapshot technology.

# **Cross-site syncing**

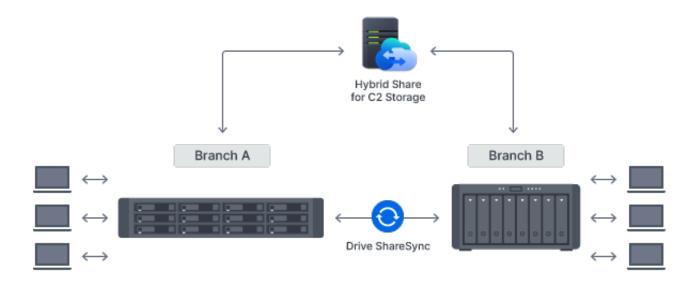

### Secure site-to site file and folder syncing

Make sure branches always have up-to-date copies of crucial documents and data available locally by syncing Synology systems one or two-way using Synology Drive ShareSync. Have files updated across locations each time there is a change to efficiently keep all stakeholders on the same page.

### Efficient cross-site syncing through the cloud

Boost syncing speeds, cut bandwidth use, and reduce your storage footprint by leveraging the powerful connectivity of our data centers. Synology Hybrid Share intelligently synchronizes data to Synology devices. Large or less frequently accessed files are stored on the cloud to reduce local storage requirements, while frequently used files are stored

on local devices to provide users access at LAN speeds.

# Central backup server

Back up PCs, servers, Synology systems, SaaS data, and VMs, and back up your backup servers themselves with a scalable central storage solution.

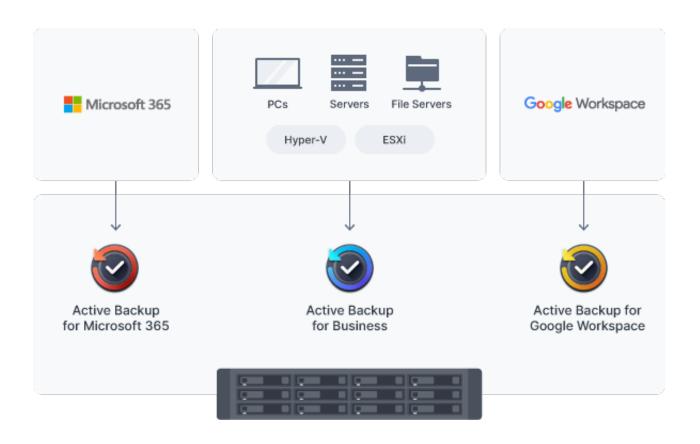

## **Back up Windows and Linux endpoints**

### Bare-metal PC, server, and VM backup

Securely back up Windows clients and servers, Linux endpoints, Synology systems, and VMware<sup>®</sup> and Hyper-V<sup>®</sup> virtual machines to the SA6400 with Active Backup for Business. Manage them through a centralized management console and choose between bare-metal or file-level restoration. Built-in data deduplication maximizes storage efficiency.

## SaaS protection with local backups

Protect Microsoft 365 and Google Workspace accounts by maintaining complete offline copies of your crucial information and configurations with Active Backup for Microsoft 365 and Active Backup for Google Workspace.

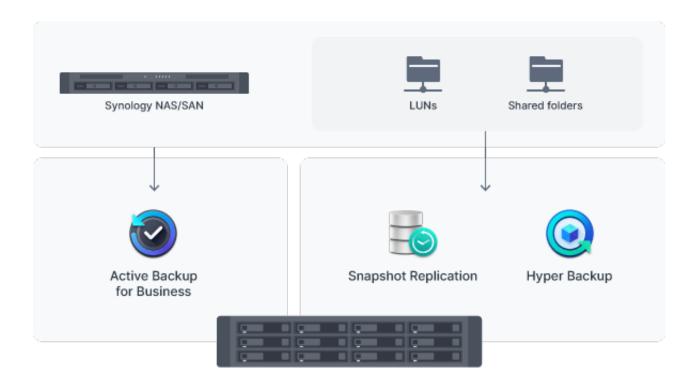

### **Backup destination for shares and LUNs**

Use Hyper Backup to back up files, LUNs, installed applications, and system configurations from tens or hundreds of Synology servers to your SA6400. Set and forget backup tasks with regular schedules, enhance security with fine-grained user permissions and encryption, reduce backup sizes with built-in deduplication, and restore data flexibly with multi-versioning.

Snapshot Replication enables configurable point-in-time snapshots of shared folders and LUNs with an RPO as low as 5 minutes and recovery within seconds.

### Bare-metal backup for Synology systems

Manage bare-metal backups of all your Synology servers from a single centralized console on the SA6400. Leverage built-in deduplication technology to reduce backup sizes while multi-versioning provides flexible restoration options.

## **Business application platform**

Host cost-efficient business solutions, either through containers, virtual machines, or Synology DiskStation (DSM)'s own solutions, including a powerful free backup suite, a versatile mail server, and a surveillance VMS with transparent licensing.

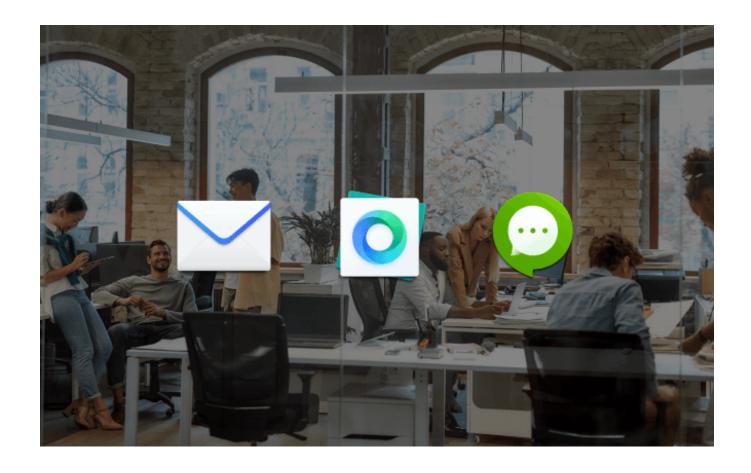

### **Synology productivity solutions**

#### Collaboration in a secure cloud

Create and edit documents, spreadsheets, and slides together with your whole team in real time. Easily migrate existing documents from other platforms and take ownership of your files in a secure private cloud.

Synology's private cloud mail solution provides ease of use, full data ownership, and robust data security with a low total cost of ownership thanks to its perpetual licensing model.

Keep teams connected through encrypted one-on-one private chats, public channels, and group conversations. Efficiently organize discussions with bookmarks, searchable hashtags, and chatbots.

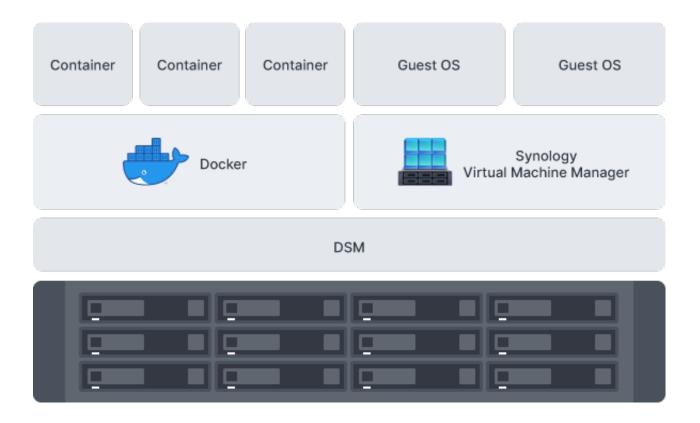

Containerization and virtualization-ready

**Application test environment** 

Run Docker containers and VMs on SA6400 using Docker and Synology Virtual Machine Manager (VMM) — a hypervisor for virtualized versions of Windows<sup>®</sup>, Linux<sup>®</sup>, and DSM — to safely test and evaluate applications.

Virtual DSM serves as a test environment for package updates or to add an additional layer of security between applications, systems, and data.

## Centralized monitoring and management

Stay on top of your fleet and keep it in optimal condition with our cloud and DSM-based monitoring and management solutions.

## **Central Management System (CMS)**

Conveniently manage your fleet of Synology systems from a centralized console.

## **Active Insight**

A powerful cloud-based platform for monitoring performance, backup status, login activity and performing lightweight management tasks.

## Synology has you covered

The SA6400 is backed by Synology's 5-year limited warranty, including technical support and hardware replacement services to maximize your return on investment and ensure continued high-quality performance.

Surveillance Station Default Licenses 2 (Additional cameras require

.

Suggested Maximum IP Cameras and Total FPS (H.264)

Suggested Maximum IP Cameras and Total FPS (H.265)

Notes

### purchase of licenses)

- 1080p: 160 channels, 2800 FPS
- 3M: 160 channels, 1600 FPS
- 5M: 120 channels, 1200 FPS
- 4K: 80 channels, 800 FPS
- 1080p: 200 channels, 6000 FPS
- 3M: 160 channels, 2800 FPS
- 5M: 160 channels, 1600 FPS
- 4K: 120 channels, 1200 FPS
- Surveillance Station 9.1.3 or above is required to support the maximum IP cameras and FPS figures listed.
- Performance figures are obtained from testing conducted with the device fully populated with drives, with their default memory configuration, and under a continuous recording setup. Actual system capabilities may vary based on configuration, drive performance, enabled features, and the presence of additional workloads.
- Use NVR Selector to

- quickly find a suitable model based on your requirements.
- The number of streams that can be viewed simultaneously is **twice** the suggested maximum number of cameras. For example, if the suggested maximum number of cameras for a model is 10 under H.264, 1080p, the model can support up to 20 streams of the same specification at the same time.
- Performance metrics improve with the addition of expansion units. For detailed figures, please refer to this article.

**Synology Drive** 

Recommended Number of Concurrent Sync Clients

recommended number of hosted files was reached) 100,000,000 (applies to files

2,000 (the number of

connections that can be maintained when the

Recommended Number of Hosted Files

indexed or hosted by <u>Synology Drive</u>. For file access through other standard

protocols, refer to the File Services section above)

Notes

 Exceeding the recommended numbers above will not block application operations, but may result in longer

- response time.
- Utilizing SSD cache can significantly improve performance.
- Models with expandable memory are tested with their maximum supported memory.
- Btrfs file system and non-encrypted shared folders were used during the aforementioned testing.

**Synology Office** 

Suggested Users **Notes** 

#### 20,000

- Suggested users is derived from testing in an environment with 60% idle users (each logging in and viewing documents) and 40% active users (each executing random actions at intervals of 20 to 40 seconds) operating within documents, 30 users. Learn more
- Models with expandable memory are tested with their maximum supported memory.
- Client performance may affect maximum simultaneous editing users. Client PCs used for testing: Intel Core i3-3220 / 8GB RAM
